Hardworking and eager to learn, with skills in coding and web development. Looking to start a career in tech and contribute to a team while gaining hands-on experience.

SKILLS

Programming : JavaScript, Python

Database : MongoDB, MySQL

Version Control: Git, Github

Library/Framework: React, Express

Others: Compiler Design, Software Engineering, DAA, operating System

PROJECTS

Spend Sense | Personal Project | github.com/S672672/Spend-Sense-project | January 2024 - April 2024

- Developed Spend Sense, a financial tracking web application using the MERN stack (MongoDB, Express.js, React, Node.js), incorporating advanced features such as dynamic expense tracking, detailed data visualization through charts, and secure user authentication with role-based access control. The application is optimized for performance with a responsive, mobile-first design using Tailwind CSS, and integrates APIs for real-time data and financial insights. With a scalable backend, Spend Sense is built to handle a large user base while maintaining fast load times and a seamless user experience.

Hamro Mart | Personal project | github.com/S672672/Inventory_tracking | May 2024 - November 2024

- Developed an Inventory Tracker for a grocery application using the MERN stack (MongoDB, Express.js, React, Node.js). This tool enables efficient tracking of stock levels, real-time updates on item availability. With a user-friendly interface built using React and Tailwind CSS, the tracker ensures seamless inventory management. The backend is optimized for performance, with secure APIs to handle large datasets, ensuring a scalable solution for grocery stores.

Pet adopt-Pet care | My personal | github.com/S672672/PVVVI | December 2023 - November 2024

- Developed a Pet Adoption Marketplace using the MERN stack (MongoDB, Express.js, React, Node.js), providing a platform where users can give away pets they no longer want, and others can search and adopt them. The platform allows users to list pets with detailed profiles, including breed, age, and health status, while prospective adopters can browse available pets using various filters. With a responsive design built using Tailwind CSS and a robust search feature, the application ensures a smooth user experience. The backend efficiently handles listings, searches, and user interactions, offering a scalable solution for the pet adoption process.

EDUCATION

Btech Computer Engineering | Rk University | 2021-April, 2025

COURSEWORK

Data Structures and Algorithms | Javascript/Python | 2024

- Applied problem-solving techniques to optimize algorithms for real-time features, ensuring efficient data processing and quick responses.

Computer Network | 2024

- Applied networking concepts to design secure, efficient APIs, ensuring reliable communication between client and server in all web apps.

DBMS | SQL | 2023

- Leveraged SQL to design and implement scalable databases for storing large datasets in all projects, enabling efficient queries and data retrieval.

CERTIFICATIONS

Javascript Intermediate | Hacker Rank | 2024

- Certified as the javascript developer by Hacker Rank

Python for Data Science | IBM | 2023

- Python for data Science by IBM
